# Auditportal

The system in regular auditing

Quality and cost-minimization – two inseparable concepts in the race for consumers.

Being cost-effective, yet providing the best quality possible and assuring the safety parameters – this is one of the biggest challenges, when it comes to quality assurance.

For both producers and distributors, it's an absolute necessity to accomplish the yearly on-site audit, in case one wish to authentically certify that their products are made and handled according to the product and food safety regulations.

This Auditportal module of the FoodSys Quality Control and Technological Portal, offers help during the whole audit process to those, who need an audit – for their own company, or their suppliers.

Auditportal module creates online connection between the procurer, the auditor, and the audited company. Auditportal module supports effectively the whole process: from the order, through the report, up until specifying and performing the corrective actions.

The Auditportal module:

- provides online connection between the procurer, the auditor, and the audited company, right from the beginning of the process
- online tracking of the audit's results, provided for distributors and suppliers
- easy to reach database of the former audits' results and performed corrective actions - these information increase the effectiveness of the on-site audit, by determining the focus areas
- sends automatic „audit validity expires soon" notification to the supplier and the distributor.

The benefits offered to You and your company:

- easy to track and check the activity of the suppliers
- the module helps to make all the suppliers to have a valid audit, with exposed and accepted results; the specified corrective actions are traceable and controllable
- the reports made out of the audit's results support risk analysis and decision making processes, concerning a certain product group or supplier
