# Measurable product quality & safety

Food manufacturers and distributors are obligated to prove the quality and safety of their products by valid certifications. On a regular base, they need to authentically certify the quality of their products with tests and exams made by accredited test laboratories.

The LabSys module of FoodSys Quality Control and Technological Portal provides online connection between the accredited test laboratories, the manufacturers, the suppliers, and the distributors. The module supports the whole laboratory test process (from sampling till report the results); provides quick and easy way to search among the data; makes the communication easy right from the order, throughout the whole process, up until publishing the results. The test results can be accessed by both the procurer and the supplier. Thanks to the alerting function, in case of any problem, instant recalling is possible (e.g. product recall).

The LabSys module:

‧ contains all the optional/obligatory parameters and measurement methods by product groups
‧ guarantees the automatic evaluation of the test results, comparing them to the standards
‧ register and store the lab test results and reports
‧ effectively supports trend analysis – by suppliers, products and time periods
‧ register the data needed for analytical and microbiological risk analysis
‧ can be used both to ad-hoc and yearly tests

The benefits offered to You and your company:

‧ the run of the product quality becomes a process easy to control
‧ the alerting function sends instant notification to the assigned partners in case of any problem
‧ provides easy and quick way to make different statistics, based on the reports, listed by the user defined parameters
‧ perpetual tracking of the process by the procurer
‧ ready to forward/print/store reports in excel and pdf-format, based on the listed data
